

Fetal Bovine Serum (FBS)

Gamma Irradiated

or

Description

Biowest Gamma Irradiated Fetal Bovine Serum (FBS) is a sterile-filtered serum providing essential proteins, growth factors and attachment factors to support cell growth, maintenance and adhesion *in vitro*.

The serum undergoes gamma irradiation at 25 kGy to reduce the risk of viral and other microbial contamination associated with animal-derived products.

This treatment is intended to improve the microbiological safety of the serum while preserving its suitability for cell culture applications.

Triple-filtered through 0.1 µm filters, each batch is quality-controlled for endotoxin, haemoglobin, total protein, mycoplasma, BVDV and cell growth performance.

Product information

Frozen

-18°C to -40°C

60 months

Applications

Cell culture

Viral and vaccine production

Ordering information

FBS Europe, Gamma Irradiated

S140G-100	100 ml
S140G-500	500 ml

FBS South America, Gamma Irradiated

S181G-100	100 ml
S181G-500	500 ml

Other packagings available on request.
