Product information

Frozen

-18°C to -40°C

60 months

Description

Biowest Human Serum and Plasma are collected from voluntary donors and processed under controlled conditions. Rich in naturally occurring proteins, antibodies, hormones and other biological components, they are suitable for cell culture and biochemical research applications.

Human serum is obtained after blood coagulation, while plasma is collected using anticoagulants, preserving fibrinogen and other coagulation factors.

Available Products:

- **S4180** | Pooled donations from different blood groups and male and female donors.
- **S4190** | Collected from male AB blood group donors, without naturally occurring anti-A and anti-B antibodies.
- **S4200** | Pooled donations from different blood groups and male and female donors.

Each batch undergoes rigorous quality control testing, including screening for HIV-1/2, hepatitis B, hepatitis C, and syphilis.

Applications

Cell culture
Western Blot, ELISA

Ordering information

Human Plasma Pooled

S4180-100	100 ml
S4180-500	500 ml

Human Serum HIV tested

S4200-020	20 ml
S4200-100	100 ml

Human Serum AB male HIV tested

S4190-020	20 ml
S4190-050	50 ml
S4190-100	100 ml

Human-derived products must be considered potentially infectious and handled accordingly.*
